Verified examples of inconsistent judge credit

A. Equivalent answers, same item

MedICaT · modality · sample 352
Question: ইমেজিং পদ্ধতিটি কী?
English gloss: What is the imaging modality?
Reference: সিটি (CT)

Qwen2-VL-2B — **LAVE: 0.3 / 1**
Answer: **CT**

MedVLM-R1 — **LAVE: 0.0 / 1**
Answer: **CT scan**

Both answers name the reference modality, but receive different, partial or zero credit.

B. Correct yes answers, different items

Chest X-ray · abnormality · MedGemma 4B
Both questions ask whether an abnormality is present.
Reference for both: হ্যাঁ (yes)

Sample 0 — **LAVE: 1.0 / 1**
Question: কোনও অস্বাভাবিকতা আছে কি?
Answer: হ্যাঁ (yes)

Sample 3 — **LAVE: 0.0 / 1**
Question: এই ছবিতে কোনও অস্বাভাবিকতা লক্ষ্য করা গেছে কি?
Answer: **Yes**

The correct English answer receives no credit. These are different items, not a controlled language intervention.

Answers and scores are copied from saved outputs. The judge receives the reference and answer, not the question.
These examples verify scoring failures; they do not quantify their effect on the aggregate model gap.
